

Crane Application

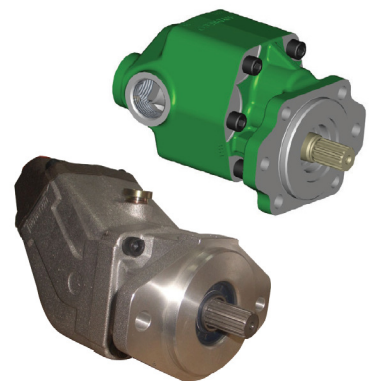

Hydreco Powauto can provide a great range of transport hydraulic products to crane applications

The brand name Powauto is synonymous with top quality transmission power take-off (PTO) equipment to suit most vehicles used in Americas and around the world. Hydreco Powauto specialise in manufacturing PTO equipment to suit the many different gearboxes used in today's heavy transport vehicles and have an active research and development programme to ensure they keep abreast of the many changes in modern vehicle transmissions.

The basic PTO range includes nearly 350 different models with thousands of variations of these basic units available to cater for customer requirements.

The crane application often requires high pressure, high flow pumps and Powauto has a large range of high pressure gear and piston pumps. Our hard working components are designed with high resistant materials and heat treated to allow for extended life and sustainable performance.

We also have a large range of pneumatic controls, hydraulic control valves, in-line relief valves, filtration systems, oil and lubrications, couplings, hose and fittings and much more to cater for the application needs.
