## SECTIONAL DIRECTIONAL VALVE

SDL	280 bar	40 l/min
SDM	320 bar	50 l/min
SDS	320 bar	60 l/min

**INTRODUCTION**

SDL, SDM and SDS are sectional directional control valves. They can be assembled in parallel with up to 10 working sections. The same components allow creating series circuits by inserting plugs in order to modify the oil path.

Working elements are available in two thicknesses with working ports 3/8" BSP, 1/2" BSP, SAE-06 or SAE-08 threads.

Specific components for series circuits are available upon request.

**FLUIDS**

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C (180 °F) causes the accelerated degradation of seals as well as the fluid physical and chemical properties.

From a safety standpoint, temperatures above 55 °C (130 °F) are not recommended.

**SDL OPERATING PARAMETERS**

<b>MAXIMUM OPERATING PRESSURE</b>	P - A - B ports	280 bar	4000 psi
	P1 and P2 ports	280 bar	4000 psi
<b>FLOW CAPACITY</b>	parallel	40 l/min	10.6 gpm
	series	40 l/min	10.6 gpm

**SDM OPERATING PARAMETERS**

<b>MAXIMUM OPERATING PRESSURE</b>	P - A - B ports	320 bar	4600 psi
	P1 and P2 ports	250 bar	3600 psi
<b>FLOW CAPACITY</b>	parallel	50 l/min	13.2 gpm
	series	40 l/min	10.6 gpm

**SDS OPERATING PARAMETERS**

<b>MAXIMUM OPERATING PRESSURE</b>	P - A - B ports	320 bar	4600 psi
	P1 and P2 ports	250 bar	3600 psi
<b>FLOW CAPACITY</b>	parallel	60 l/min	15.9 gpm
	series	50 l/min	13.2 gpm

The curves define the flow rate operating fields according to the valve pressure. The values have been obtained according to ISO 6403 standards, with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage.

Values obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

**NOTE:** The reverse flow condition occurs in series circuits made with elements for parallel connection and plugs, in even-position elements only.

Look at the hydraulic diagram at page 22.

The solenoid consists of tube and coil. The coil is mounted on the tube and fastened to it by a ring retainer.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

### ELECTRICAL CONNECTIONS AND IP DEGREES

Declared IP degrees are intended according to EMC 2014/30/EU, only for both valve and connectors of an equivalent IP degree, installed properly. Mating connectors are not included in solenoid valves delivery. Connectors for K1 coils can be ordered separately.

WK1, WK7, WK7D and WK8 coils reach a better IP degree than standard coils thanks to the zinc-nickel plating and to some constructive measures.

#### SDL - K1

#### DIN 43650 (EN 175301-803)

Mating connectors type ISO 4400 / DIN 43650 (EN 175301-803).

IP degree of electrical connection: IP66  
IP degree of whole valve: IP 66

#### SDL - K2

#### AMP Junior

IP degree of electrical connection: IP65/IP67  
IP degree of whole valve: IP65/IP67

**SDL - WK7**

**DEUTSCH DT04 MALE**

IP degree of electrical connection: IP65/IP68/IP69  
IP degree of whole valve: IP65/IP68/IP69  
IP degree according to ISO 20653: IP69K

**SDL - WK8**

**AMP SUPERSEAL**

IP degree of electrical connection: IP66/IP68/IP69 -  
IP degree of whole valve: IP66/IP68/IP69  
IP degree according to ISO 20653: IP69K

**SDM - K1**

**DIN 43650 (EN 175301-803)**

Mating connectors type ISO 4400 / DIN 43650 (EN 175301-803).

IP degree of electrical connection: IP65  
IP degree of whole valve: IP 65

**SDM - K2**

**AMP Junior**

IP degree of electrical connection: IP65  
IP degree of whole valve: IP65

**SDM - K7**

**DEUTSCH DT04 MALE**

IP degree of electrical connection: IP65  
IP degree of whole valve: IP65

K1

**DIN 43650 (EN 175301-803)**

Mating connectors type ISO 4400 / DIN 43650 (EN 175301-803).

IP degree of electrical connection: IP65

IP degree of whole valve: IP 65

WK1

**DIN 43650 (EN 175301-803)**

Zinc-nickel plated coil.

IP degree of electrical connection: IP66

IP degree of whole valve: IP66

The pin for manual override is boot-protected (code B).

K2

**AMP Junior**

IP degree of electrical connection: IP65/IP67

IP degree of whole valve: IP 65

K7

**DEUTSCH DT04 MALE**

IP degree of electrical connection: IP65/IP67

push manual override: look at the model number for further choices.

socket hex adjustment screw: Allen key 4 clockwise rotation to increase pressure

mounting pattern ISO 6263-03 without T port

locking nut: spanner 13

**Ports:** P, T = 3/8" BSPP

**NOTE:** please refer to page 10 for missing dimensions of the mounting interface

**OUTLET SECTION 00: BLIND**

**OUTLET SECTION 01: P PORT**

**OUTLET SECTION 02: T PORT**

**NOTE:** please refer to page 10 for missing dimensions of the mounting interface

**OUTLET SECTION 03: BOTH P AND T PORTS**

Ports: P1, T1 = 3/8" BSPP

**NOTE:** please refer to page 10 for missing dimensions of the mounting interface

**INSTALLATION**

The stacked valve assembly can be installed in any position without impair the proper functioning.

Ensure that there is no air in the hydraulic circuit.

Assembly kits are available and can be ordered by codes in the tables below. Please contact the technical dept. for dimensional check of special assemblies before order.

**ASSEMBLY KIT**

The assembly kit includes:

- no. 3 studs,
- no. 3 self locking nuts
- no. 3 washers

All parts are zinc-coated.

Please use these codes to order the kit:

Valve type	Sectional valves	Code
SDL-B15 SDL-S15	3	H3404100100
	4	H3404100101
	5	H3404100102
SDM-B15 SDM-S15	6	H3404100103
	7	H3404100104
	8	H3404100105

	4	H3404100109
SDS-B2 SDS-S2	5	H3404100110
	6	H3404100111

Tightening torque: 20 (0 / +3) Nm

**CIRCUIT EXAMPLE : PARALLEL CIRCUIT**

**CIRCUIT EXAMPLES : SERIES CIRCUITS**

Series circuits are made with sectional valves with D4 spools, by inserting plugs between elements. The oil path is diverted from P to T line alternatively.

Please note that this kind of configuration requires a different outlet plate depending on the number (even or odd) of sectional directional valves in the assembly.

plug  $\varnothing 9$  - ordering code: **H0612253**

#### IP DEGREE TIPS

The technical reference standard for IP degree is IEC 60529, which classifies and rates the degree of protection provided by equipments and electrical enclosures against intrusions.

The first digit (6) concerns the protection from solid particles (body parts to dust).

The second digit of the IP rating concerns the liquid ingress protection. It indicates three different types of atmospheric agents from which provide protection:

Values from 1 to 6 → water jets.

Values 7 and 8 → immersion.

Value 9 → high pressure and high temperature water jets.

This means that IP66 covers all the lower steps, rating IP68 covers IP67 but not IP66 and lower. Instead, IP69 does not cover any of them. Whether a device meets two types of protection requirements it must be indicated by listing both separated by a slash. (E.g. a marking of an equipment covered both by temporary immersion and water jets is IP66/IP68).

Supported by a worldwide network
