

HYDRECO AT EIMA 2026: INTEGRATED SOLUTIONS FOR MOBILE MACHINERY CONTROL

Hydraulics, electronics and control systems working together on a tracked mini dumper. At Hall 18, Stand C33, Hydreco will showcase four dedicated solution areas covering cooling systems, human-machine interfaces, hydraulic valves and pilot valves.

Vignola (Modena), Italy, October 29th, 2026 – Hydreco Hydraulics, a company of the Duplomatic Group, part of Daikin, will exhibit at EIMA International 2026, taking place in Bologna, Italy from 10 to 14 November.

At Hall 18, Stand C33, Hydreco will present hydraulic and electronic solutions for mobile machinery motion control, including a complete system installed on a tracked mini dumper.

A complete motion control system on a tracked minidumper

The tracked mini dumper will be equipped with a range of Hydreco components, including a multiple pump from the HY1 series, hydraulic pilot controls, an MHDC electronic joystick, an electronic control unit (ECU), a power supply unit with accumulator, a hydraulic cylinder and a directional control valve.

The installation demonstrates how pumps, control systems and electronic devices work together to manage machine movement and working functions. The tracked mini dumper provides a practical example of Hydreco's approach to integrated system design, combining hydraulic and electronic expertise to meet the specific requirements of machine manufacturers.

This approach is aligned with the **Daikin Group's Fusion 30 strategy**, which aims to strengthen the Group companies' role as providers of complete solutions, going beyond individual components.

Four dedicated areas for key mobile machinery applications

The Hydreco stand will also feature four dedicated areas covering the main functions of mobile machinery:

- **Fan Drive Solutions:** hydraulic gear motors with a range of accessories, designed to drive cooling fans for heat exchangers.
- **Human Machine Interface (HMI):** joysticks, pedals and control devices for machine operation and function management.
- **Valves Solutions:** hydraulic directional control valves and other valve solutions for controlling and regulating hydraulic flow and machine working functions.
- **Pilot Valves Technology:** hydraulic pilot valves and control devices designed for precise, progressive control of machine functions.

C.F. e num. iscr. Reg. Imprese MO 02832070581 - codice SDI: 2LCMINU
P. IVA IT 00797180361 - Cap. Soc. € 60.000 i.v.

Società soggetta all'attività di direzione e coordinamento da parte di Hydreco Hydraulics Ltd

Visitors will be able to explore the individual product families and discover how they can be combined to meet the design and operating requirements of different applications.

“Everything it takes to make it move” is Hydreco's message for EIMA 2026, reflecting a product portfolio ranging from hydraulic components to electronic control systems, with a focus on providing machine manufacturers with integrated solutions.

Hydreco's technical and sales team will be available at the stand to present the products on display and discuss specific application requirements with visitors.

About Hydreco Hydraulics

Hydreco Hydraulics Italia, with facilities in Vignola (Modena) and Parma, is the Italian subsidiary of the UK-based Hydreco Group, headquartered in Poole. Acquired in 2019 by the Diplomatic MS Group, based in Parabiago (Milan) and now part of Daikin, the Group recorded turnover of €142 million and employed more than 700 people as of 31 December 2025. With over a century of experience in hydraulic components, Hydreco Hydraulics designs, manufactures and distributes products for the transport sector and mobile hydraulic applications. With operations in Italy, Norway, Germany, the United States, India and Australia, Hydreco has a worldwide manufacturing and sales network.
